

Dear Sir/Madam,

I regards to this issue it is clear that this propasal, with the dire and serious consequences it would bring about, would only profit your agency and the power companies. What is your mission statement? Don't forget, radio waves need as much protection as any National park or refuge, it would go against the grain of your agency to even entertain such an idea! Haven't you been trying to stop or minimize interference? If this is your true concern, and not the money, why not FIBER OPTICS?? NO INTERFERNECE, MULTI-USE FOR EVERYONE, AND ALMOST UNLIMITED BANDWITH. Don't forget that ham's are normal folk too; they watch tv, use microwave ovens, etc. Consider them your ally during discision making time, after all, they don't require any favoritism. -Dave Curry
